

Care and Maintenance of KegWorks Bar Rail

Proper care of your bar foot rail is important in maintaining its quality over time. As they are built to support the feet of you and your guests, wear and tear can and likely will occur with use. You can make your bar rail last longer by using our polishing or touch up kits, and following our tips to help you make the best purchase and care of your setup.

Brass

- Polished Brass is the finish most susceptible to fingerprints, oxidation, and tarnish.
- Prior to installation of a polished brass rail, apply non-abrasive car wax for a long-lasting shine. Re-apply at least 3 times per year for best results.
- Brushed Brass hides imperfections in the bar rail over time better than Polished Brass, and will not need to be wiped down as regularly.

Stainless Steel

- Brushed Stainless Steel hides imperfections in the bar rail over time better than Polished Stainless Steel, and will not need to be wiped down as regularly.
- Clean with a Metal Cleaner product, such as Maas Metal Cleaner, or simple warm water and vinegar mixture 2-3 times per year to best maintain the finish.
- For removal of rust or discoloration, coat the rail with a mix one cup of water and one tablespoon of baking soda and gently scrub off stains to avoid damaging the finish.

Powder Coat

- Powder coat finishes can be wiped down with warm water, or water and soap.
- Gunmetal Grey and Sunset Copper are our most scratch-resistant finishes.
- Be sure to order a touch-up kit if you order a Matte Black finish, as this powder coat can chip off over time.
- We only recommend using mild detergent soap and warm water to clean powder coating. Harsh chemicals and other cleaners can harm the finish.

Industrial Black Pipe

- Black Pipe bar rail is more corrosive than our other finishes and more susceptible to rusting over time.
- To prevent rusting, apply polyurethane or lacquer prior to installation.

For outdoor use, all bar rail options should be treated with a clear-coating to protect against corrosion and damage*

*Please note that clear-coating will add 1-2 weeks to delivery time

Wear and Tear Over Time: Expected vs. Unusual

Given the nature of the product, typical wear and tear may be noticed with your bar rail over time, such as scuffs, scratches, and dirt. However, though some surface wearing is expected, larger problems like large dents in the rail, chipping or flaking powder coat, or large/deep scratches could indicate an issue with the product and warrant a phone call to our Customer Care team (877.636.3673).

Expected Wear and Tear:

- dings
- scuffs
- minor scratches
- dirt and grime

Unusual Wear and Tear:

- chipping or flaking powder coating
- large/deep scratches
- deep dents or bending

Our Products

Whether your bar rail is scratched or just in need of some clean-up from all the feet they have assisted over the years, we offer polishing or touch-up paint kits to have it looking as good as new in no time.

Cleaning/Polishing Kits

- Maintain the shine of your precious metals with our reusable Cape Cod polishing cloths.
- Can be used with our stainless-steel and brass finished bar rails.

Touch Up Paint Kits

- Get rid of those pesky scratches in your bar rail finish with our touch up paint.
- We offer touch up paint to match our oil-rubbed bronze, gunmetal grey, sunset copper, and matte black powder-coat finishes. Thoroughly clean the surface and apply a thin layer of touch-up paint to cover the scratch.
